

## **ABTRACT**

**Title:** Influence of personality to cope with new motoric skills among beginning indoor skydivers.

**Objectives:** The main objective of this work is to determine whether there is a link between the performance of the indoor skydiving for beginners and their personalities, eventually their level of anxiety before this sport.

**Methods:** Literature search, the implementation of a questionnaire survey, observation, analysis and evaluation of data, graphical presentation of results.

**Results:** Extraversion, openness to experience and situational anxiety – only these of observed factors have impact on the performance the indoor skydiving. Extraversion and openness to experience affect performance in direct proportion, to the contrary, situational anxiety affects it inversely proportional.

**Key words:** Motoric learning, indoor skydiving, beginners, personality
